Fixed bugs

- No bugs fixed

New features

- Cleanup for SCCM application previous versions (deployments and supersedence clean + retire)
- Remote installation with SCCM Console only
- New scheduled task system.

Other improvements

- Less revisions on SCCM application insert
- SCCM WMI query performance improvements
- SCCM supersedence and deployment cleanup will increase client performance
- SCCM ID based collection, distribution point group and category on settings (rename possible)
- SCCM new "All active previous versions" superseed type. Good option with cleanup.
- SCCM deployment email send is now on deployment time (before it was application insert time)
- Log for CSM actions in SCCM integration
- SCCM icon insert problem is now error (will fail application insert)
