

# Open a Windows PowerShell connection on CSM for SCCM server

Last Modified on 06/09/2017 3:37 pm EEST

In order for CSM for SCCM to function properly the service account must meet the requirements. One of the requirements is a valid PowerShell interface connection. It can be allowed in a following way.

1. Open System Center Configuration console and select Connect via Windows PowerShell.

2. Enable the interface connection by choosing A as always run.
