PDFCreator 3.3.0 was not published on Centero Software Manager because of the bug, which would brake an application in certain scenarios. PDFCreator developers recommend to stay on a previous version. They are also working for a fix, that will be included in a next version of PDFCreator.

What will CSM support team do?

- This version won't be published on CSM, thus you shouldn't be worried.
- We will continue monitoring, when a new version with this bug fixed is released and then publish it on CSM.

What can you do before next release?

- There are no security fixes in a version 3.3.0.
- Relax and enjoy your life 😊.
