

SOFTWARE MANAGER

1 - Re-import application

If you have edited deployment process in CSM and want deployment process changes to be applied to already imported application, you need to re-import application.

1. Delete deployments and desired application from SCCM console.
2. Open Centero Software Manager and select application from list, and click "Delete" from top bar. Confirm delete.
3. Click "Start download" to start downloading, or you can wait approx. 30 minutes for application to be re-imported.
