22. Why you might want to switch Citrix Receiver to Citrix Workspace

Last Modified

On august 2018, Citrix released Workspace app, a successor for Citrix Receiver. Citrix Workspace app aggregates and incorporates the full capabilities of Citrix Receiver as well as other Citrix client technologies - including HDX, the Citrix Gateway plug-ins, and Citrix Endpoint Management Secure Hub.

Citrix Workspace app also has full integration of Citrix Content Collaboration (formerly ShareFile) in the new **Files** tab. With this integration, all your data is accessible within Citrix Workspace app. The ability to upload and download files and even open files within Citrix Workspace app are now integrated into one application. Citrix Workspace app is also enhanced to deliver additional capabilities regarding data loss prevention, secure access to SaaS apps, secure internet browsing capabilities, advanced search, and more. Read more about Workspace.

We recommend all our customers to consider switching Citrix Receiver to Citrix Workspace App since Citrix Receiver is no longer regularly updated.

If you are ready to change to Workspace app, you can change Receiver to Workspace from our management portal.
