Permissions required for CSM for Intune

Last Modified

CSM for Intune requires two individual registered Azure AD enterprise applications to be consented with specific permissions to Intune tenant.

Centero Azure AD Connector:

- Reads Azure AD users, devices and groups in the customers tenant.
- Requires customers Azure AD administrator (Global Administrator) to consent the application permissions.
- Is used by Centero Portal to verify that Customer's User is allowed to link the tenant to CSM for Intune.
 - The Customer's user signed in the Centero Portal must be either Global Administrator or added as a member to Centero Azure AD Connector Enterprise application.
- Requires the following permissions to Customers tenant:

API name	Permissions	Type	Granted through
Microsoft Graph	Read directory data	Application	Admin consent
Windows Azure Active Directory	Sign in and read user profile	Delegated	Admin consent or User consent

CSM for Intune

- Manages Intune apps and deployments.
- Requires customers Azure AD administrator (Global Administrator) to consent the application permissions.

SOFTWARE

missions to customer tenant.

MANAGER

API name	Permissions	Auth type	Granted through
Microsoft Graph	Read and write Microsoft Intune apps	Application	Admin consent
Microsoft Graph	Read Microsoft Intune devices	Application	Admin consent
Microsoft Graph	Read organization information	Application	Admin consent
Windows Azure Active Directory	Sign in and read user profile	Delegated	Admin consent or User consent
