

# CSM for MECM - Requirements for platform

Last Modified on 02/06/2023 10:17 am EEST

Centero Software Manager Integration Client must be installed somewhere on your internal network.

## 1. CSM Integration Client

- Microsoft supported operating system
- AD domain joined
- Microsoft .NET Framework 4.x
  - **SCCM 2103 requires .NET Framework 4.7.2 or later**
- MECM Management Console including PowerShell modules for MECM
- 100Mb of free disk space for CSM Integration Client
- Administrative level user account for installation
- Outbound access to the following addresses:
  - gw-eu.software-manager.com (TCP/443)
  - centerofileshares.file.core.windows.net (TCP/443)

### **Note**

If you are running older version of CSM Integration Client, then allow also HTTP (TCP/80) access to same addresses!

If you are restricting outbound access by IP addresses, you need to allow access to Azure Front Door addresses. [See this page](#) for more information

## 2. CSM applications

- SMB network share for storing downloaded application installation media

### **Note**

You should reserve at least 50Gb of free disk space on the share. You can use **Retired cleanup** function in CSM to remove old application medias
