

Task Sequence Automatic Update configuration

Last Modified on 11/05/2022 11:44 am EEST

Note

Your task sequence must contain at least one group inside it in order to update it with CSM

You can use Centero Software Manager to update new applications to your operating system installation task sequences. This feature requires additional privileges in MECM (Operating System Deployment Manager role) for CSM Service account.

To configure CSM to update your task sequence, open Centero Software Manager and go to "SCCM Integration" tab. Choose deployment process that you want to use for updating task sequences. The task sequence setting is related to the chosen collection. CSM for MECM will deploy the new version to task sequence as soon as the **available** time of the deployment is reached.

Choose your task sequence and group that you want to use.

The screenshot displays the 'Deployment settings' tab in the Centero Software Manager interface. The 'Collections' section shows a table with one entry: '1st CSM Group', which is highlighted in blue. The 'Available (simulated)' and 'Required (simulated)' columns both show the time 'ti 25.9. 10:12'. Below the table, the 'Deployment settings' section includes fields for 'Collection name' (1st CSM Group), 'Collection type' (Device), 'Deploy purpose' (Required), 'User notification' (Display all), and a 'Comment' field. The 'Scheduling' section has options for 'Make deployment available' and 'And force installation', both set to 'Immediately'. The 'Email notifications' section includes a 'Template name' (EmailTemplate - Deployment Notifications) and an 'Email address' field. The 'Update task sequence on available time' section has 'Task sequence name' set to 'CSM Test Task' and 'Task sequence group' set to 'Centero Software Manager'.

Collection	Available (simulated)	Required (simulated)
1st CSM Group	ti 25.9. 10:12	ti 25.9. 10:12

Deployment settings

Collection name: 1st CSM Group

Collection type: Device

Deploy purpose: Required

User notification: Display all

Comment:

Scheduling

Make deployment available: Immediately after [] working days on [] at []

And force installation: Immediately after [] working days on [] at []

Email notifications

Template name: EmailTemplate - Deployment Notifications

Email address:

Update task sequence on available time

Task sequence name: CSM Test Task

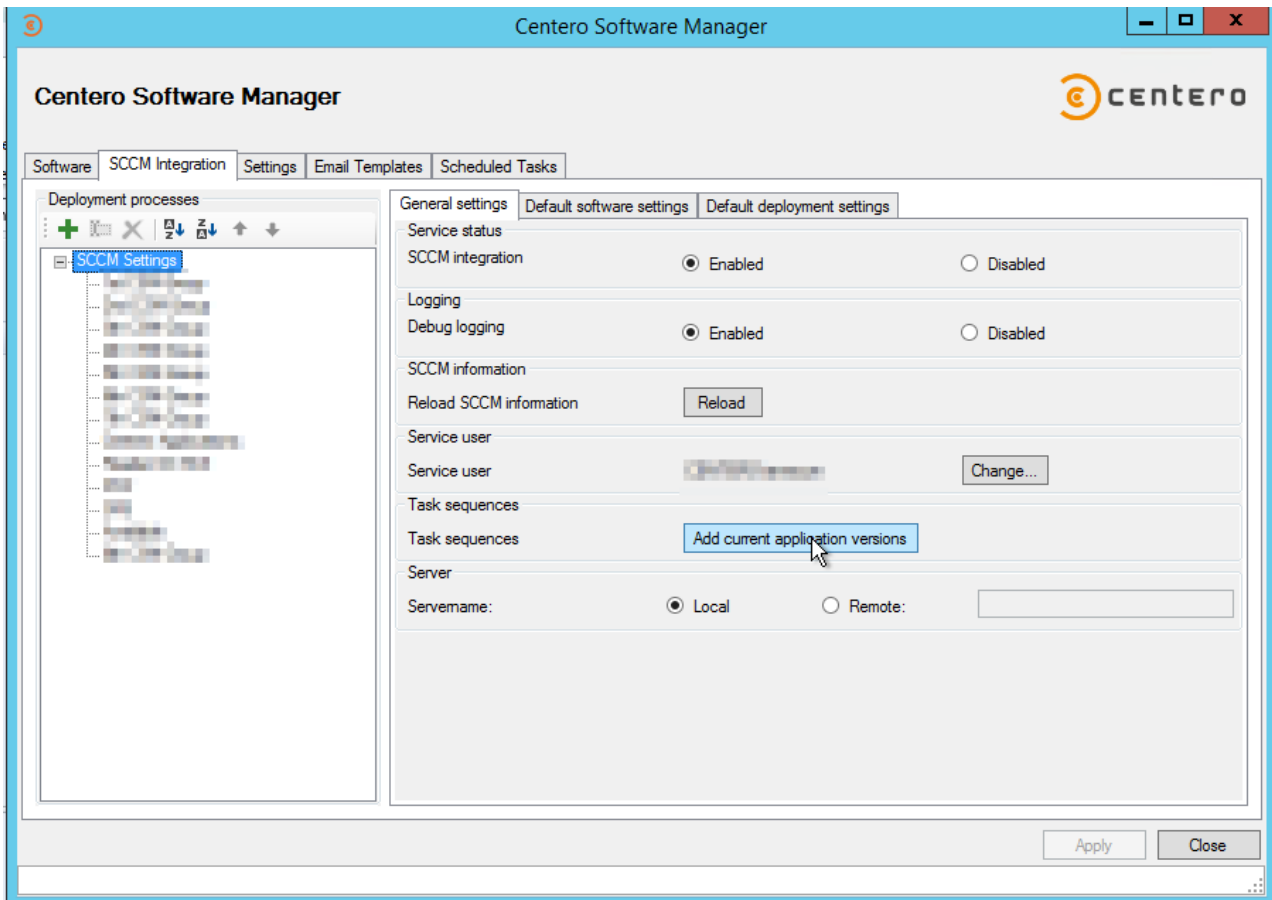

Task sequence group: Centero Software Manager

Any new versions of chosen applications will be added to task sequence once they are published. If you want to

software

add already imported current versions of applications to task sequence, go to "SCCM Settings" and select "Add current application versions"

Notes:

If you don't want for any reason to update new application version to task sequence, go to "Scheduled Tasks" tab in CSM. From here you can find list of tasks CSM is scheduled to do. Find and select wanted application version with type "Add to task sequence" and select disable or delete. If you choose disable, you can later time re-enable it by pressing "Enable" from top bar.
