software

Instruction video about the update process from CSM integration client version 1.x to CSM version 2.x

Your browser does not support HTML5 video.

Updating Centero Software Manager is semi-automatic and it requires a few actions on a server with CSM installed. Follow these steps after Centero has announced a new version is released.

1. Launch **Centero Software Manager**.
2. You will be prompted to update CSM. Select **Yes**.

3. Select **Start update** and confirm the update by selecting **Yes**

4. Select **Exit** after CSM is updated

5. Launch Centero Software Manager and update configurations with **Yes** if prompted

Additional steps after updating CSM from older version (<1.0.5088) to 2.0.5000 or later:

6. You will be prompted to enter ID and key to login to CSM. Follow [these instructions](#) to find the ID and key for your environment.

software

Login

You can get ID and key from [Centero Portal](#)

Environment ID

Environment Key

Ok Cancel

7. Once you have filled in your ID and key information, you will be prompted to login with CSM service user. This is the same AD account as you have used before in CSM.

Change service user

 MECM deployments will not work correctly if the service is ran as a local system account!

OK

Service user credentials

Username

Password

Ok Cancel

If you don't remember the previous CSM service user, you can find the username from any CSM created application in MECM. Open application properties and check **Created by** information:

Specify the administrative users who are responsible for this application.
