

SOFTWARE MANAGER

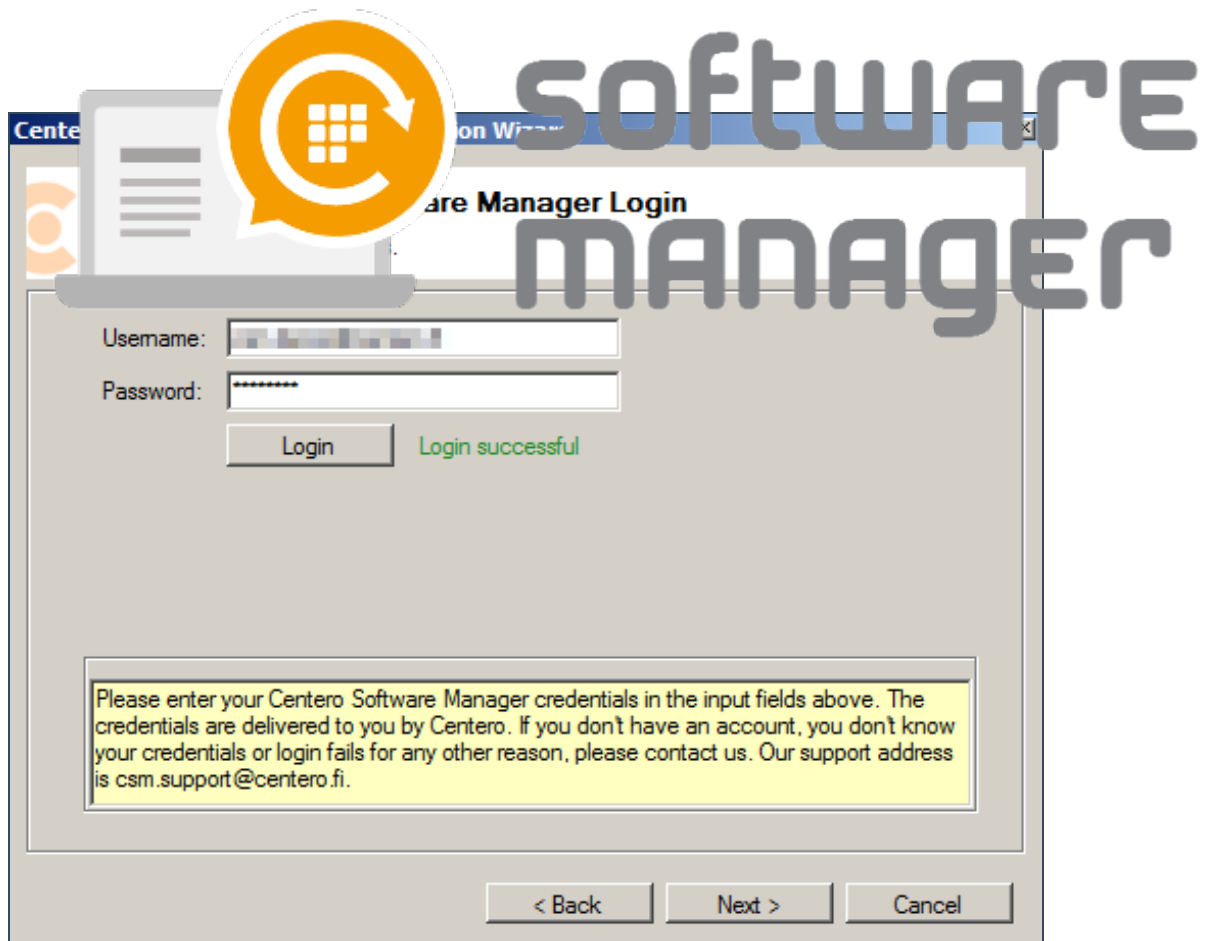

1. After installation is complete, launch CSM for WSUS from Windows Start Menu.

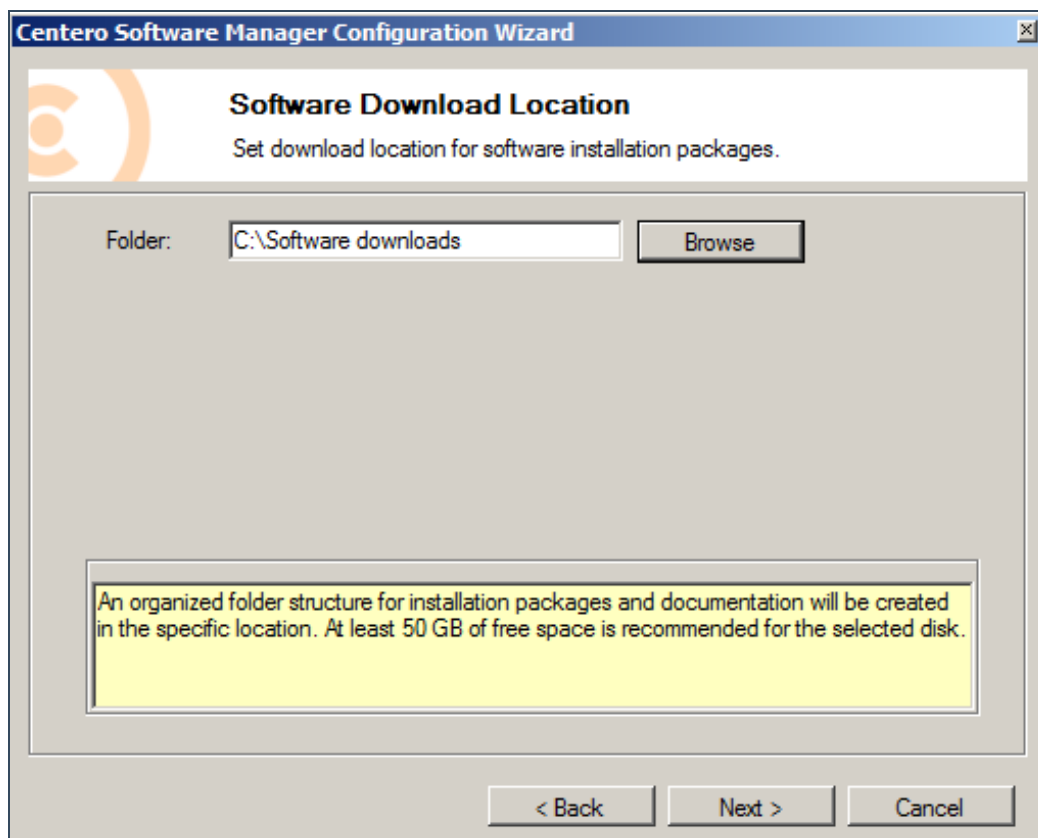

2. Proceed with the wizard by clicking next.

3. CSM for WSUS requires organization specific credentials to connect cloud for managing chosen 3rd party software. Input the credentials and click login. The wizard will now inform of successful login. Proceed by clicking next.

4. CSM for WSUS downloads 3rd party software to a chosen location. Browse for a suitable location and proceed by clicking next.

SOFTWARE MANAGER

5. Select the integration type. Once you are installing CSM for WSUS it's obvious by the following options.

Center Configuration Wizard

Integration Type

Select integration type.

System Center Configuration Manager (SCCM)

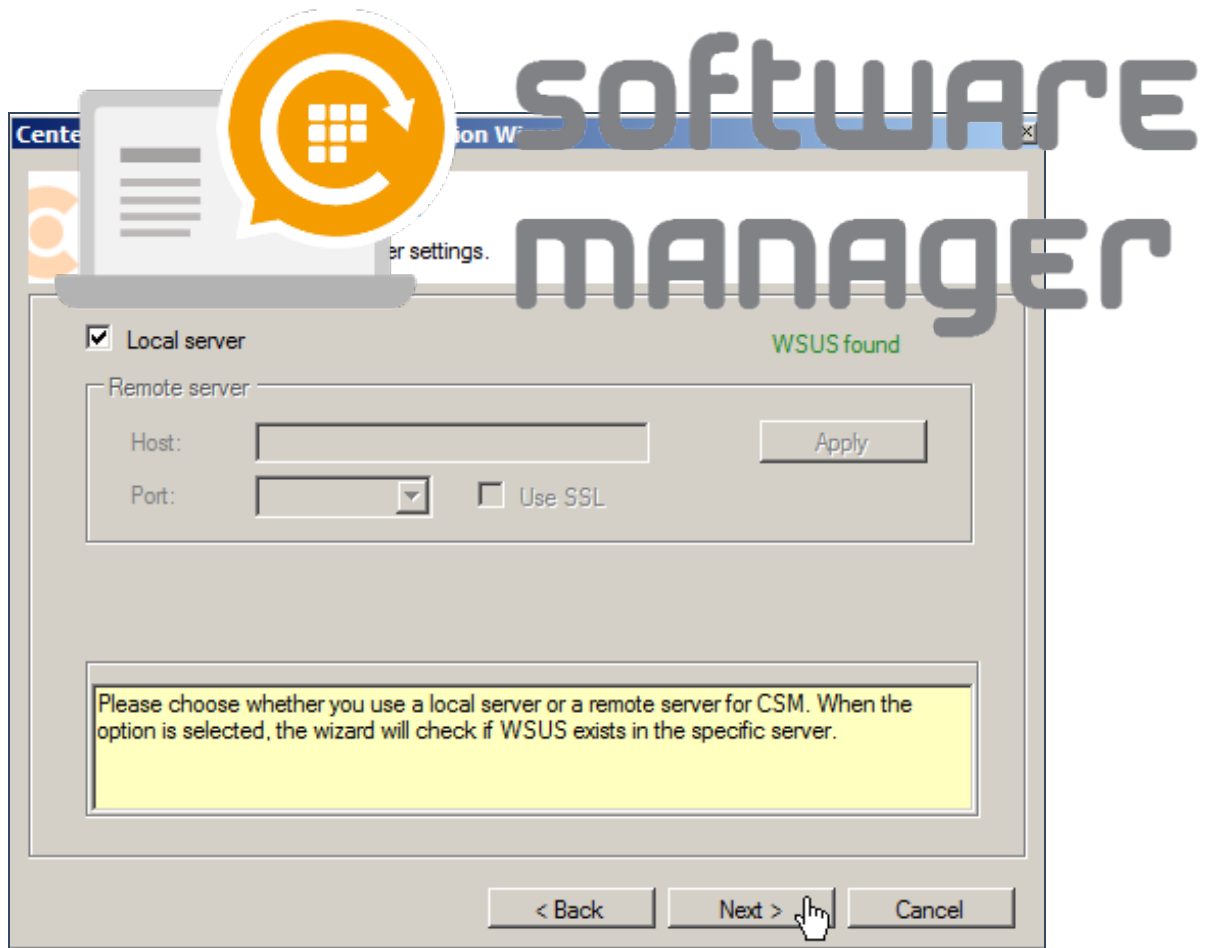

Windows Server Update Services (WSUS)

Only package download

If you only wish to download third-party software packages without any integration to your current system, please select only package download. For the integration scenarios, please choose an option corresponding to your current update delivery system.

6. We recommend CSM for WSUS to be installed on the same server with WSUS-component. To do this, check the local server check box. In order to use a remote server in deployment leave the box unchecked and provide host name and port to input fields. After choosing the deployment method and confirming a valid WSUS server please proceed by clicking next.

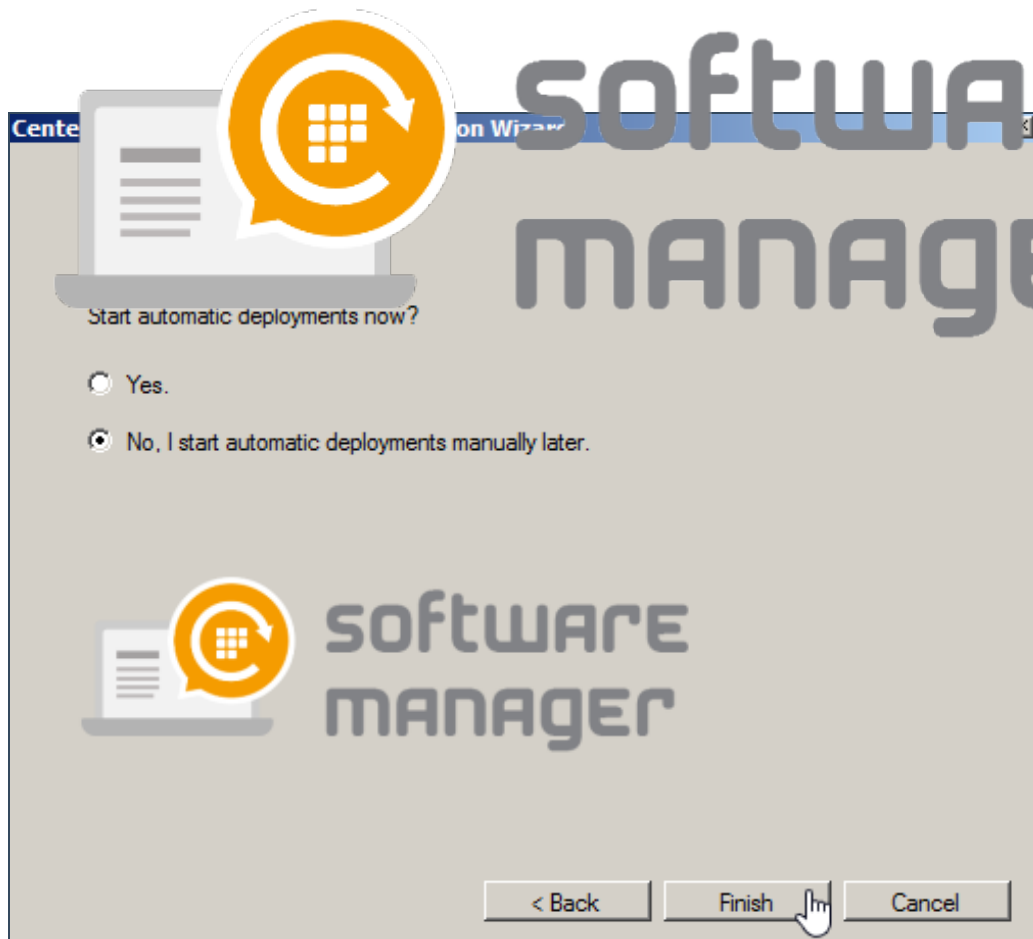

7. At this point the wizard retrieves the WSUS groups. The deployment process for the managed software can be configured. WSUS groups are listed and deployment phases can be selected. By default, these three deployments are scheduled to be effective immediately, after a week and after two weeks. Proceed by clicking next.

As a sidenote, these settings can be modified later on.

8. The initial wizard is now complete. We recommend to review the defined configuration by choosing **No** and proceeding to advanced settings by clicking finish. If you feel happy with the configuration the deployments can be started right away by clicking **Yes**.

SOFTWARE MANAGER

Start automatic deployments now?

- Yes.
- No, I start automatic deployments manually later.
