

Media & SMTP Settings

Last Modified on 21/10/2022 10:08 am EEST

Media settings

Packages root is the path where CSM downloads all 3rd party applications. It can be local folder or a UNC path and it can differ from the [content location path in MECM](#)

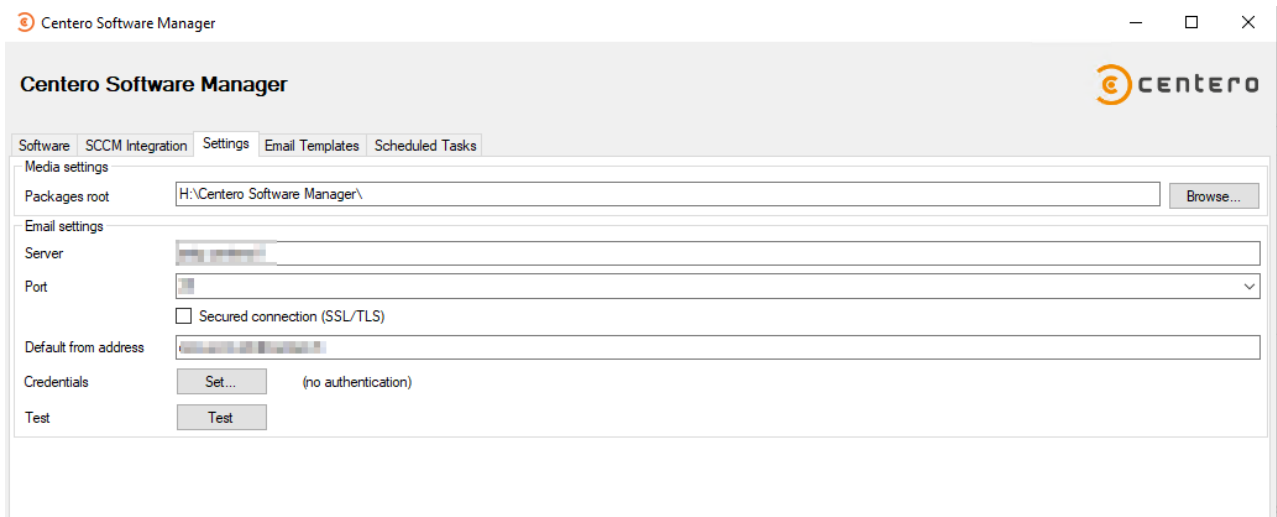

Email settings

Server and Port specifies the SMTP server CSM uses to send email notifications

Default from address is the address CSM uses to send email notifications

Credentials can be used if the SMTP server requires authentication to send emails

Test can be used to test functionality of the SMTP settings

The screenshot shows the 'Centero Software Manager' application window. The title bar reads 'Centero Software Manager'. The main header contains the 'Centero' logo and the text 'Centero Software Manager'. Below the header is a navigation menu with tabs for 'Software', 'SCCM Integration', 'Settings', 'Email Templates', and 'Scheduled Tasks'. The 'Settings' tab is active, and the 'Media settings' section is expanded. The 'Media settings' section includes a text input field for 'Packages root' with the value 'H:\Centero Software Manager\' and a 'Browse...' button. The 'Email settings' section includes a text input field for 'Server', a dropdown menu for 'Port', a checkbox for 'Secured connection (SSL/TLS)', a text input field for 'Default from address', a 'Set...' button for 'Credentials' (with '(no authentication)' displayed next to it), and a 'Test' button.
