

Settings

- **Filesystem root folder for packages** - The network path used as a content location in Configuration Manager. This is set during the first run configuration.
- **Send logs to Centero** - Configure whether or not you want to send application import logs to Centero. By default the value is **True**, but you can set it to **false**.

Email notification (all deployment as table)

- **Template name** - Select which email template to use for email notification. We recommend choosing **Email Template - All deployments table** if you want to an notification containing all the details of created application and its deployments.
- **Mail address** - Configure email notification recipients. You can also use a distribution list or multiple recipients separated by a comma.

The screenshot shows the 'Centero Software Manager' application window. The title bar includes the application name and standard window controls. The main interface has a top navigation bar with tabs for 'Overview', 'MECM Integration', 'Settings', 'Email Templates', and 'Scheduled Tasks'. The 'Settings' tab is active, and within it, the 'General settings' sub-tab is selected. On the left, a tree view under 'MECM Settings' lists various groups, with '1st CSM Group' selected. The main content area displays the following settings:

- Filesystem root folder for packages:** \V\... \H\$\Centero Software Manager
- Send logs to Centero:** True
- Email notification (all deployments as table):**
 - Template name:** Email Template - All deployments table
 - Mail address:** distribution_ft@company.com

At the bottom right, there are 'Apply' and 'Close' buttons.
