2.0.5003

New features

- Software Manager will remove supersedence relationships to non-existing applications automatically
  - Supersedence relationships to non-existing applications will be checked and removed weekly
  - This feature will affect only the applications CSM has created and if **Retired cleanup** setting is set to **Remove retired applications and media**

Other improvements

- Application revisions will be removed from Configuration Manager before distributing content to distribution point group
  - This will solve possible performance issues when revision cleanup is set to true and application has dependencies

Fixed bugs

- Fixed an issue in CSM for WSUS version reporting
- Fixed an issue with "Available with forced upgrade" type deployment on device collections
